Overview

Key strengths	Key risks
A very successful bancassurance business model integrated into Germany's large cooperative banking sector.	Strain on profitability from COVID-19-related claims, both in the primary and reinsurance businesses, because the company is exposed to event cancellation, business interruption, and credit insurance.
One of the largest insurance groups in Germany, with a diversified source of revenue and earnings from property/casualty (P/C), life, and health insurance, as well as global reinsurance.	Potential capital and earnings volatility stemming from above-average equity exposure within the asset allocation.
Strong market credentials based on its presence in the German retail and small and midsize enterprise (SME) segments, as well as growing international diversification via its global reinsurance portfolio.	

R+V Versicherung AG (RVV) continues to be integral to DZ Bank. R+V Group is the main insurance provider for Germany's large cooperative banking sector. The insurance group complements the sector's full financial services offering by distributing P/C, life, and health insurance products to the cooperative banks' customers. The ratings on RVV reflect S&P Global Ratings' view of the intrinsic role as the operating holding and reinsurance company of R+V Group, which, in our view, is a core business of its majority shareholder and central bank of the German cooperative sector, DZ BANK AG Deutsche Zentral-Genossenschaftsbank (A+ / Stable / A-1). RVV's core status is further supported by its strategic role within the sector and its commission-generating capacity, cost-sharing function, and comprehensive integration in risk management. In addition, KRAVAG-LOGISTIC Versicherungs- AG (KLog) remains a core group entity.

Our analysis on R+V Group reflects the company's well-established position in the German insurance market, backed by its successful bancassurance business model. As per our expectations, the group's premium has remained relatively flat, with growth of around 1% in 2021. In 2020, R+V Group had outperformed its peers in terms of business growth, with an 9% increase in premiums (the German market grew at 1.6%) despite the pandemic-led weaker economy. The group targets the same retail and SME markets as the cooperative banks to drive its business growth. We believe R+V Group benefits from its extensive distribution network, sophisticated multichannel distribution strategy in German primary insurance and global reinsurance, and the strong competitive presence in all segments that underscores its strong market position. Hence, in 2022-2023, we expect premiums to increase by 3%-5% despite the rising inflation we see in 2022 in part owing to the Russia-Ukraine conflict.

We forecast R+V Group will maintain its 'A' level risk-based capital over 2021-2023. We base our assumption on the group's historical strong earnings generation, and parental support if needed. Nevertheless, we believe R+V Group's earnings and capital remains pressured by current economic-related capital market movements, in line with peers.

Outlook

The stable outlook on RVV and subsidiary KLog reflects that on DZ BANK AG and Germany's cooperative banking sector. We expect both entities will remain integral to DZ BANK AG, given their role and contributions to the cooperative sector's business strategy. The ratings on RVV and KLog consequently move in tandem with those on the core subsidiaries of the cooperative banking sector.

The stable outlook on the Cooperative Banking Sector Germany, including all core group members, reflects our expectation that while a part of the client base and revenue streams could be lost to competitors, the sector's further investments into its digital competencies will substantially defend its strong market position and avoid material reduction in earnings over the next two years.

Downside scenario

While a fairly remote prospect, we could lower our ratings on the sector's core members if their market position deteriorates materially, weakening its revenue pool and risk-adjusted profitability, or if competitive pressure leads to material signs of increasing risk appetite.

Upside scenario

We could raise the ratings if we conclude that structural challenges in German retail and SME banking have eased such that we revised the anchor for domestic banks up to 'a-', or if we believed the sector had mastered the competitive environment better than peers. This would require material progress in digital banking products and addressing structural weaknesses such as weak cost efficiency and modest profitability. We could also consider a higher rating if the sector's consolidated capitalization improves further, leading our risk-adjusted capital (RAC) ratio to sustainably rise above 15%, and we consider capital fungible within the sector to support weaker capitalized primary banks if needed. An upgrade would also depend on factors relative to those of peers supporting a higher rating.

Key Assumptions

- Germany's GDP showed a healthy recovery of 2.9% growth in 2021 after declining 4.9% in 2020. For 2022 and 2023, we expect GDP to increase about 2.9% and 2.8%, respectively.
- Ten-year government bond yields in Germany have remained negative at about 0.3% in 2021. For 2022 and 2023, we expect the yield to be around positive 0.3% and positive 0.8%, respectively.

Business Risk Profile

In our view, R+V Group's business risk profile benefits from its strong position among the three top multiline insurers in Germany, supported by its unique bancassurance model offering a broad portfolio of life and health, P/C, and reinsurance products to the open market and cooperative banks' customers.

In our opinion, the group's affiliation with the cooperative banking sector and its position in the German retail and SME target market remain its key strengths, supplemented by the recently reported distribution partnership between its Italian subgroup Assimoco and Cassa Centrale Banca (CCB). CCB group acts as one of several cooperative banking groups in Italy.

Through R+V Group's main risk carriers, R+V Lebensversicherung AG and R+V Allgemeine Versicherung AG (both not rated), the group generated an overall gross premium of around €19.2 billion in 2021, compared with €19 billion in 2020. Its dominant primary insurance business witnessed premium growth of about 1.8% in 2021. R+V Group's global third-party reinsurance generated premium income of €3.1 billion in 2021, down 1.8% from 2020. Based on our forecast, we expect the business composition to remain almost stable.

Chart 1

R+V's Premium Growth And Net Income

In our view, the group's improved business diversification stems from its expanding reinsurance segment, constituting around 16% of total gross premiums in 2021, compared with 10% in 2011. The group has organically established itself among the top 20 global reinsurers. The reinsurance portfolio is well spread (Europe 60%, North America 14%, Asia Pacific and Middle East 11%, Latin America 4%, South Africa 10%, and others 1%) and it benefits from a low cost base compared with that of peers.

In line with R+V Group's in 2021 adjusted strategy "WIR@ R+V" with a focus on growth, innovation and profitability, the group aims to achieve about €22 billion of premium income by 2026. It also plans to strengthen its exclusive partnership with the cooperative banking sector. To achieve this, R+V Group is investing in digitalization and developing an environment that will meet customers' increasing digital needs. We expect the group's premiums to increase 3%-5% annually in 2022 and 2023 despite rising inflation in 2022 and the Russia-Ukraine conflict.

Financial Risk Profile

We anticipate R+V Group's capital position will remain robust, with capital adequacy at the 'A' level in 2021-2023 supported by the group's ability to build capitalization, its well-balanced investment strategy, and overall favorable risk-capital management. R+V Group reported a healthy net income of €713 million in 2021 mainly due to improved investment results and underwriting. The net income for 2020 (€156 million) was largely affected by pandemic-related losses. The five-year average net income was around €483 million for 2017-2021. We do not expect the floods in Germany in 2021 to have a material negative impact on the group's capital and earnings, thanks to its solid capital adequacy, effective reinsurance protection, and ample equalization provision.

R+V Group has operated under its primary insurance business model for several years. We see this in its continuous above-market-average growth and buildup of retained earnings, and consequent risk-capital growth. However, we believe that R+V Group's growth strategy could constrain its ability to build capitalization in line with its growth ambitions. In the medium term, we anticipate its increasing capital requirements will be largely matched by a buildup of internal capital buffers, supported by a strong five-year average return on equity (RoE) of 6.2% for 2017-2021, and a balanced profit transfer and capital reinjection strategy with parent DZ BANK AG.

Chart 2

R+V's Strong RoE Compared With That Of Peers

RoE--Return on equity. Source: S&P Global Ratings.

Copyright © 2022 by Standard & Poor's Financial Services LLC. All rights reserved.

For 2022-2024, we expect RoE of 5%-8% based on our forecast of pre-pandemic level performance and sustainable business development and, consequently, our forecast of its capital and earnings. R+V Group already accounts for its assets under International Financial Reporting Standard (IFRS) 9, and so we see a greater effect on its combined (profit-and-loss) ratio due to fair value assessment versus insurers who still apply International Accounting Standard 39

or local generally accepted accounting practices to their investments.

R+V Group's primary P/C insurance business delivered a relatively strong combined ratio of around 97.3% in 2021, including premium growth of 3.2%. The lower claims were mainly from lower claims in motor insurance, in line with the German P/C insurance market. This is despite the negative gross impact we recognized for the German P/C market in 2021 because of the severe floods during the summer. We expect the underwriting performance to remain flat, with combined ratios of 98%-100% for 2022-2023.

For 2021, the combined ratio for R+V Group's reinsurance business was around 100%. The reinsurance business had a satisfactory 2021 because there were no significant COVID-19-related claims. Moreover, the prices for reinsurance covers were mostly adjusted to the increased claims incurred in previous years. In 2020, the reinsurance business experienced weaker technical results due to higher COVID-19-related claims, such as event cancellations and business interruptions, including a strong build-up of incurred-but-not-reported events, which led to a higher combined ratio of 107.7% in 2020. With a normalization of natural catastrophes, however, we expect a further improvement in reinsurance in 2022 and 2023. Although the expansion in the reinsurance segment in recent years enhances R+V Group's global diversification, so it adds pressure to the group's capitalization, in our view. Therefore, we believe R+V Group's reinsurance business creates an additional source of volatility for its capital and earnings and any extraordinary accelerated expansion in this business could change our view of the group's financial risk profile.

We think R+V Group's life insurance segment not only benefits from a lower overall risk profile but also displays a relatively favorable performance and cost effectiveness through scale effects, compared with peers in the German market. We note a lower overall risk profile than local peers', in particular thanks to the lower average guarantee commitments following strong business growth in recent years. Still, low yields continue to weigh on life results.

R+V Group follows a well-balanced investment strategy with fixed income investments retaining an average credit quality of 'AA'. However, the group has higher-than-market-average equity exposure and has moderately increased its investments in property and infrastructure, which could increase the overall asset allocation's risk profile. Nevertheless, we expect R+V Group's robust capital should help absorb elevated financial market risk.

Other Key Credit Considerations

Governance

R+V Group has a comprehensive strategic planning framework. The company also has a highly experienced management team, which in our opinion complements its operational needs. R+V Group has demonstrated a clear path, focusing on its key areas, and has implemented strategic initiatives, particularly in terms of maintaining its leading market position in the German insurance market and generating sustainable business growth in the reinsurance segment.

Liquidity

We continue to assess R+V Group's liquidity as exceptional. We do not foresee any refinancing concerns given the group's debt-free balance sheet. We believe R+V Group would be well covered even under stress scenarios.

Group support

We consider R+V Group core to DZ BANK AG and the German cooperative banking sector, based on its integral role in the sector's strategy. R+V Group operates under its bancassurance business model and generates sizable commission and fee income for the cooperative banks, strengthening and diversifying its overall earnings.

RVV has an intrinsic role as the operating holding and reinsurance company of R+V Group. We equalize our rating on RVV with those on the core operating subsidiaries of DZ BANK AG because of RVV's earnings-generation capacity from reinsurance activities and its debt-free balance sheet.

We continue to regard KLog as a core entity because it is the insurance group's dedicated carrier for its business relations with the German road haulage segment, which is dominated by cooperatives. KLog is fully integrated into R+V Group, which also employs KLog's staff and handles all of its operational functions.
